Artwork can be either vector or pixel and all colors CMYK process values. Vector art is generally more successful than pixel art (pixel art sometimes has edge inconsistency). You can send an Illustrator native file, eps or pdf. If pixel art is sent, it must be created at 300 dpi at actual size.

Email art files to **croakiesasi@hilcovisionoutdoor.com**. Your order will be acknowledged via reply confirmation. If color is critical please also send a hard copy output proof for onpress color matching.
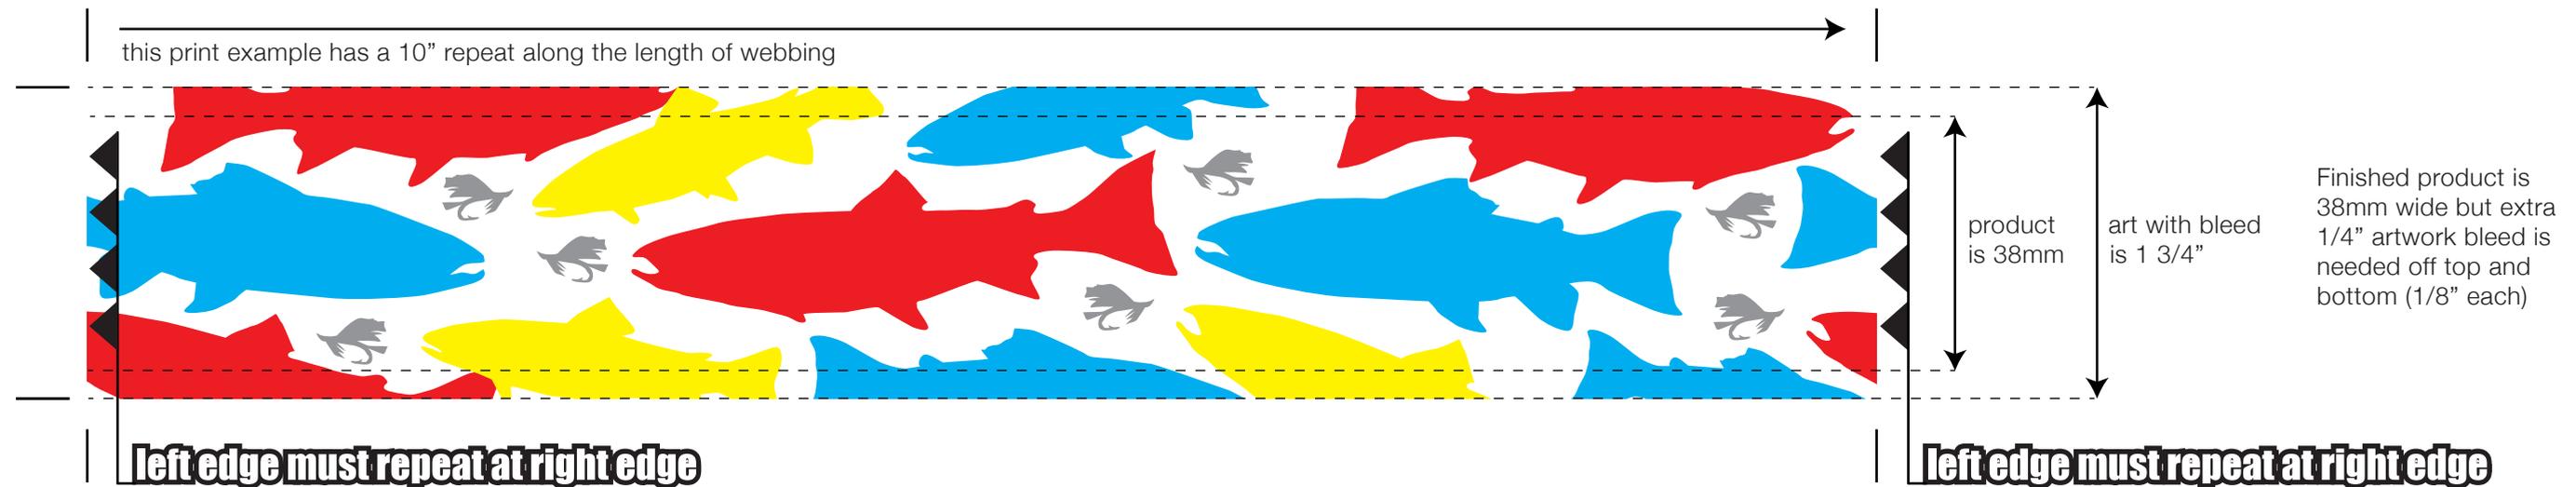

Your belt art work could be anywhere from 4" to 20" long. See the imprint guides shown below for specific height of artwork for each belt. Please note the product and bleed area dimensions.

Your art can be submitted as a complete design (with logo, message, etc. and background) or we can drop your art onto any of our solid or print backgrounds. Visit croakies.com to see our standard prints.

If submitting a complete design the most important thing is to have the art repeat or match up exactly on the right and left sides as shown below. If your art seamlessly repeats we can step and repeat it along rolls of webbing. Individual belts are cut from these long rolls of webbing. This means that we cannot guarantee exact placement of art on any finished belt. Each belt will be unique and will vary in what portion of your artwork it shows.

Be aware that if you have art that is long (10-20") it may be cropped oddly on the finished product. Your artwork also should not contain strong horizontal elements or logos that need to be positioned exactly in the middle. Because we cannot guarantee exact placement of any art on the finished belt, more random prints with angled or non-horizontal graphics will look best.

artwork template for Artisan II belt

this print example has a 10" repeat along the length of webbing

product is 38mm

art with bleed is 1 3/4"

Finished product is 38mm wide but extra 1/4" artwork bleed is needed off top and bottom (1/8" each)

left edge must repeat at right edge

left edge must repeat at right edge

ARTWORK SPECS:
> The printing method for belts is dye sublimation (process/cmyk)
> You can send digital art that is either **vector** or **pixel art (300 dpi at actual size of the imprint)**
> Your artwork can be submitted as:
    1) a complete design with your logo or message, background design elements and colors included
    2) your logo or message and we will drop it onto a solid color background of your choosing
    3) your logo or message and we will drop it onto one of our standard print backgrounds - see croakies.com for our standard prints.
